Title	Agents and Databases: Friends or Foes?
Publication Type	Conference Paper
Year of Publication	2005
Authors	Lockemann, P. C. [5], and R. Witte [6]
Refereed Designation	Non-Refereed
Conference Name	Ninth International Database Engineering and Applications Symposium (IDEAS 2005)
Pagination	137–147
Date Published	July 25–27
Conference Location	Montréal, Québec, Canada
ISBN Number	0-7695-2404-4
Abstract	<p>On first glance agent technology seems more like a hostile intruder into the database world. On the other hand, the two could easily complement each other, since agents carry out information processes whereas databases supply information to processes. Nonetheless, to view agent technology from a database perspective seems to question some of the basic paradigms of database technology, particularly the premise of semantic consistency of a database. The paper argues that the ensuing uncertainty in distributed databases can be modelled by beliefs, and develops the basic concepts for adjusting peer-to-peer databases to the individual beliefs in single nodes and collective beliefs in the entire distributed database.</p>
Notes	Invited paper.
