First Release of the Reported Speech Tagger

- GATE Components
- Reported Speech

Coinciding with the presentation of our paper on *Minding the Source: Automatic Tagging of Reported Speech in Newspaper Articles* at LREC 2008, we are happy to announce the first public release of our free/open source Reported Speech Tagging Components.

These components were developed by Ralf Krestel within the Fuzzy Believer project, a system that reads newspaper articles and builds a belief base based on a simulation of a human reader.
