Joint Conference on Digital Libraries (JCDL 2011)

June 13-17, 2011 - Ottawa, Canada

<http://www.jcdl2011.org>

Hosted by the University of Ottawa

Sponsored by ACM SIGIR, ACM SIGWEB, and IEEE-CS TC DL

The ACM/IEEE Joint Conference on Digital Libraries is a major international forum focusing on digital libraries and associated technical, practical, organizational, and social issues. JCDL encompasses the many meanings of the term "digital libraries", including (but not limited to) new forms of information institutions and organizations; operational information systems with all manner of digital content; new means of selecting, collecting, organizing, distributing, and accessing digital content; theoretical models of information media, including document genres and electronic publishing; and theory and practice of use of managed content in science and education. Digital libraries are distinguished from information retrieval systems because they include more types of media, provide additional functionality and services, and include other stages of the information life cycle, from creation through use. Digital libraries also can be viewed as a new form of information institution or as an extension of the services libraries currently provide.

The theme for JCDL 2011 is "Digital Libraries: Bringing Together Scholars, Scholarship and Research Data", in recognition of the changes the digital age is now bringing to scholarship, broadly writ. Publishing models are changing, along with the breadth of digital material that must be managed coherently in the context of users forcing the move from information silos to a landscape of interconnected systems supporting scholarship for both research and education. Additionally in a number of disciplines we are seeing funding agency directives to include with primary scholarship those materials on which the scholarship is based such as data sets both in the sciences and humanities. Further, we are seeing more focus on requirements for managing data for use in the future by other scholars.

The intended community for this conference includes those interested in all aspects of digital libraries such as infrastructure; institutions; metadata; content; services; digital preservation; system design; scientific data management; workflows; implementation; interface design; human-computer interaction; performance evaluation; usability evaluation; collection development; intellectual property; privacy; electronic publishing; document genres; multimedia; social, institutional, and policy issues; user communities; and associated theoretical topics. JCDL welcomes submissions in these areas, and submissions associated with the JCDL 2011 theme of "Digital Libraries:Bringing Together Scholars, Scholarship and Research Data" are particularly welcome. The conference sessions, workshops and tutorials will cover all these aspects.

Participation is sought from all parts of the world and from the full range of established and emerging disciplines and professions including computer science, information science, data science, librarianship, data management, archival science and practice, museum studies and practice, information technology, medicine, social sciences, education and humanities. Representatives from academe, government, industry, and others are invited to participate.

JCDL 2011 will be held in Ottawa, Canada on the campus of the University of Ottawa. The program is organized by an international committee of scholars and leaders in the Digital Libraries field. Several hundred attendees are expected for the five days of events including a day of cutting edge tutorials; 2 1/2 days of papers, panels, and keynotes; and 1 1/2 days of research workshops.
