

## NLP Services Provided by Semantic Assistants in ReqWiki

The screenshot shows the ReqWiki interface. At the top, there is a search bar with the word 'insurance' and a detailed description of what it means. Below the search bar is a navigation bar with tabs: 'Available Assistants', 'Results Target', 'Global Settings', and 'Console'. The 'Available Assistants' tab is selected. A sub-menu titled 'Available Assistants' is open, showing a list of services: 'Select a service', 'Information Extractor', 'Writing Quality', 'English Dumb Indexer', 'Requirements QA Defects', 'Requirements QA Stats', 'Readability Metric Stats', 'ReadabilityMetrics', and 'Person and Location Extractor'. The 'Select a service' option is highlighted. To the right of this menu is a 'Collection' section with a list box and buttons for 'Add' and 'Clear'. Below the interface, there is a note: 'Step 1. Select the service you wish to execute on your collection. Once you add this page to your collection, you can continue browsing as your collection is saved.'
