- [semapro 2009](#)

Start: 2009-05-20

Timezone: America/Montreal

The inaugural International Conference on Advances in Semantic Processing, SEMAPRO 2007, was initiated considering the complexity of understanding and processing information. Semantic processing considers contextual dependencies and adds to the individually acquired knowledge emergent properties and understanding. Hardware and software support and platforms were developed for semantically enhanced information retrieval and interpretation. Searching for video, voice and speech [VVS] raises additional problems to specialized engines with respect to text search. Contextual searching and special patterns-based techniques are current solutions.
