Seventh IEEE International Conference on Semantic Computing
September 16-18, 2013
Hyatt Regency Irvine
Irvine, California, USA
http://www.ieee-icsc.org/

The field of Semantic Computing addresses the derivation of semantic information from content and the connection of semantics to knowledge, where "content" may be anything including structured data, video, audio, text, hardware, software, process, etc.

The Seventh IEEE International Conference on Semantic Computing (ICSC 2013) continues to foster the growth of a new research community. The conference builds on the success of the past ICSC conferences as an international forum for researchers and practitioners to present research that advances the state of the art and practice of Semantic Computing, as well as identifying emerging research topics and defining the future of the field. The event is located in Irvine, California at Irvine Hyatt. The technical program of ICSC 2013 includes workshops, invited keynotes, paper presentations, panel discussions, industrial 'show and tells', demonstrations, and more.
