OWL Exporter and document tracking feature

Hi there Semantic Software Lab friends.

Great work on the OWL Exporter which I'm currently trying as the final component of a GATE pipeline.

Now a question for you:

The feature that keeps track of which documents have been processed seems to work all the time irrespective of whether a Document annotation with a sourceUrl attribute is in the annotation list.

However, for testing and debugging purposes (especially when running the pipeline from within GATE Developer) sometimes it is useful to keep exporting instances from the same documents to the ontology.

So is there a way to disable the tracking feature?
